**DETAILED ACTION**

***Specification***

1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.
2. The abstract of the disclosure is objected to because it describes a method while the claims are about semiconductor devices. Correction is required. See MPEP § 608.01(b).
3. The disclosure is objected to because of the following informalities: page 15 lines 12 and 15 use the remark "\*" without any attached explanation.

Appropriate correction is required.

***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 30-32 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
6. The term "controllable" in claims 30-32 is a relative term which renders the claim indefinite. The term "controllable" is not defined by the claim, the specification does not provide a standard for ascertaining the requisite degree, and one of ordinary skill in the art would not be reasonably apprised of the scope of the invention. It is not clear what

thickness is recited because it is not clear what is recited through use of "substantially reproducible".

***Claim Rejections - 35 USC § 102***

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

8. Claims 10-16 and 22-29 are rejected under 35 U.S.C. 102(a) as being anticipated by Yamazaki U.S. Patent No. 5,955,745.

The Yamazaki reference disclose a device comprising:

a silicon substrate 23 forming one of a collector and an emitter (fig. 8), the substrate being of a first conductivity type (col. 9, lines 24-35);  
a layer of SiGe<sup>27</sup> of a second conductivity type covering at least a portion of the silicon substrate; and  
a first layer of polysilicon 29 of the second conductivity type at least substantially supported by and covering a substantial portion of the SiGe layer with the exception of a window region, forming a SiGe base of the transistor; and, a second layer of polysilicon of the first conductivity type covering and contacting the SiGe base of the transistor, said layer of polysilicon forming the other of the collector and the emitter.

The two layers of polysilicon are separated by an insulating layer 30.

***Conclusion***

9. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thanh V Pham whose telephone number is 703-308-2543. The examiner can normally be reached on M-T (6:30-5:00).
